

Dear Senate Committee on Rules,

HB 3456 A - Please opposed establishment of photovoltaic solar power generation facility on certain high-value farmland. You should support solar facilities placed on Low-Value Farmland. As the human population grows, the need of High-Value Farmland will increase. Decisions made now, effects the future production of Food for growing populations. Using High-Value Farmland for other purposes is foolish and unwise.

Thank you for your full consideration.
