

**HB 3427 A STAFF MEASURE SUMMARY**

**Joint Committee On Ways and Means**

---

**Prepared By:** Matt Stayner, Budget Analyst

**Meeting Dates:** 6/28

---

**WHAT THE MEASURE DOES:**

Requires the owner or operator of a dam with a high hazard rating to develop an emergency action plan with the Water Resources Department (WRD), the Office of Emergency Management (OEM), and the emergency services agency in the county where the dam is located. Directs WRD to determine the frequency of emergency response exercises at such dams, in consultation with OEM and the local emergency services agency. Requires WRD to inspect such dams annually unless it determines that a different inspection schedule is appropriate. Provides that the measure does not apply to a dam that is regulated under the safety program of a federal agency.

**ISSUES DISCUSSED:**

**EFFECT OF AMENDMENT:**

**BACKGROUND:**

Oregon has dams of many different sizes and uses. Some dams are for generating power and are very large, others are quite small and used to create ponds. Oregon has approximately 1,300 large dams that store water for many purposes and more than 10,000 smaller dams which make ponds for waterfowl, livestock, and irrigation of crops. Oregon currently has 75 state-regulated high hazard dams; 58 of those have emergency action plans and 13 have early warning systems. High hazard dams are those where loss of human life is expected should the dam fail.

House Bill 3427 requires owners or operators of high hazard dams to develop emergency action plans. The measure further directs WRD to determine the frequency for conducting emergency response exercises at high hazard dams and to inspect them annually, unless the WRD determines that a different inspection schedule is appropriate.
