Subject: SB3

As a small scale miner who has nearly been put out of business because of all the restrictions on motorized mining I urge you to please block SB3 from going through. People don't realize that if it can't be grown it has to be mined or it don't exist. Every metal part comes from mining. Without mining we would be living in huts with skins for clothes.

If possible please stop the moratorium that is in place now. Small scale 4" dredging is actually beneficial to fish and other water living creatures. It isn't done when the Salmon are getting ready to spawn and it makes deep holes in our creeks that stay cooler in summer for the benefit of other types of fish.

Sincerely;
Randy Waters
