

## TESTIMONY REGARDING House Bill 2043:

### Weed Control Appropriations & Emergency Declaration

#### HOUSE COMMITTEE ON AGRICULTURE AND NATURAL RESOURCES

February 7, 2017

#### MEMBERS

*Representative Brian Clem, Chair*  
*Representative Susan McLain, Vice Chair*  
*Representative Sherrie Sprenger, Vice Chair*  
*Representative Greg Barreto*  
*Representative Sal Esquivel*

*Representative Caddy McKeown*  
*Representative Karin Power*  
*Representative David Brock Smith*  
*Representative Brad Witt*

Distinguished Chair Clem, Vice-Chair Krieger, Vice-Chair McLain and Committee Members,

The Clackamas Soil and Water Conservation District welcomes the opportunity to provide written testimony regarding the proposed emergency declaration for the “*immediate preservation of the public health and safety*” as a result of invasive weeds and the proposed appropriations to the Oregon Department of Agriculture for addressing this emergency through targeted weed control efforts. As an organization that works directly with the Oregon Department of Agriculture on noxious weed control, we are familiar with the impact that invasive species have on our local economy and natural resources.

Weeds are more than a gardener’s dilemma. They threaten the livability of our communities and adversely impact our social, economic, and natural resources. One recent study entitled the *Economic Impact from Selected Noxious Weeds in Oregon* looked at just 25 of our 128 designated noxious weeds and found that these 25 species alone cost Oregonians “\$83.5 million in personal income to the State’s economy” per year<sup>1</sup>. Without active management these losses are predicted to rise to 1.8 billion annually. These damages are disproportionately felt by our agricultural and natural resources-based producers.

Noxious weeds also impact the livability of our communities. Many of the invasive species currently targeted by the Oregon Department of Agriculture pose a threat to human health and property. Some weeds are known to cause severe rashes and burns while others are highly poisonous to people, pets, livestock, and wildlife. These invasive weeds degrade the quality of life we Oregonians enjoy and alter the way we interact with our surroundings.

Oregon's wild lands and natural areas are also adversely impacted by invasive species. Noxious weeds displace our native plants and animals, degrade the quality of our natural resources, and result in a landscape that is less Oregon-like. This disruption of our local ecology leads to the continued degradation of our natural systems and the viability of our tourism-based economy. Oregon's natural areas generate millions of dollars of revenue from tourism each year and form a vital component affecting the livability of our communities.

The Oregon Department of Agriculture serves a vital role to the citizens of Oregon by mitigating the many direct and indirect impacts from invasive species. The assistance and tools they provide through their network of regional Integrated Weed Management Coordinators are invaluable resources that empower local entities like the Clackamas Soil and Water Conservation District. Recently announced reductions in funding for the Oregon Department of Agriculture has meant that important and irreplaceable functions such as Oregon's Biological Control Program are now slated for elimination. This program alone has resulted in a purported \$13 return for every dollar spent<sup>ii</sup>. The proposed emergency declaration and appropriations to the Oregon Department of Agriculture as outlined in House Bill 2043 would help to preserve a vital weed control program and continue to protect Oregon's most valuable resources.

We sincerely thank you for the opportunity to provide testimony on an issue of such importance to Oregonians.

*Respectfully,*

Tom Salzer,

*General Manager*

Samuel Leininger

*WeedWise Program Manager*
