Honored chair and committee members:

It has come to my attention that SB 115 is up for discussion and it would make it illegal to use or buy or sell leaded fuel in the state of Oregon—this seems to be a little early as piston aircraft need to have leaded fuel to run and there is no alternative for the thousands of aircraft out there yet. This would include emergency operations like search and rescue, medical flights to transport people to hospitals, fire fighting and then there is the agriculture use also. Then there is the whole general aviation community that brings many dollars to various communities that have airports. As a member of Oregon Pilots Association and Linn county experimental aircraft association I would plead to not pass this bill until a substitute is found and in production. Thank you for your consideration of this important matter.
