Hi Senators,

Are you aware and I drought that you are that Aircraft engines have been running on 100LL seance WW11. Jimmy Doolittle helped formulate this while working for Shell Oil. It was formulated with lead to lubricate the engine valves. This keeps the valve stem from wearing and sticking in the valve guide. These engines have been made to work well with this formula. By making your proposed new rule(SB115) would show your lack of concern for public safety. If you precede with the Bill you should be held responsible for all engine failures after that.
