February 15, 2017

Honored Chair and Committee Members,

I am sending this message to state my opposition to any measure that requires the removal of lead additives from aviation fuels prior to a suitable substitute; currently being researched by the FAA and other agencies.

If aircraft owners are deprived of this fuel for their aircraft engines, this would have a significant impact both economically and socially and it would also impact development in the rural Oregon areas.

I would ask that you move forward and give this issue a great deal of thought, and consider equity and fairness and keep in mind the fact that current aviation fuel already contains less lead than regulations state.

Thank you!

Carl W. Wieneke
