Senate Committee on Environmental and Natural Resources

Dear Sirs,

I have just learned of SB115 proposing the elimination of low leaded aviation fuel in the State of Oregon by January 1st 2022. I request you to withdraw or postpone the proposed legislation.

Low leaded aviation fuel is the only fuel approved for my general aviation airplane engine. The use of any other fuel in my aircraft engine will cause damage and render my airplane unusable. Currently, there are efforts underway to develop a replacement fuel for aircraft. However, numerous tests and study are required before this fuel option may be available for me to use. This option may not be ready for the market by the proposed date for the elimination of low leaded aviation fuel.

Therefore, I respectfully request this proposed legislation be withdrawn or postponed at this time.

Thank you.

Sincerely,  
Philip Cloutier
