RE: SB 115

I am opposed to SB115. The aviation community depends of use of aviation fuel. The FAA has been heavily involved in the development of a replacement fuel for what now exists, considered toxic. If SB 115 is approved it could conflict with the FAA efforts and wreak havoc of the aviation community, including many health and safety flight vehicles now in use. The federal government will ultimately provide for a replacement fuel, why muddy the water with a state regulation?

Sincerely Yours,

James D. Rodine Ph.D., CEG 160
