

Committee Members:

Please reject HB4135. The growing population of people who may be unable to speak for themselves, due to age-related diseases, **MUST** still be able to choose their Advance Directives to direct their own care in such instances. To add to their diseases the possibility of being starved and dehydrated to death (in order to decrease costs to health Insurers and Providers) will be a direct assault upon such people! This is morally void and very reminiscent of NAZI ism; for such assaults on humanity will **NOT** stop at this injustice!

Protect the Citizens who elected you, and **VOTE NO** on HB4135.
