

For the record I am Anne Nesse and I am testifying today for SustainableEconomiesNW

I present positive evidence for passage out of committee for SB 1507: *24001*
HISTORY

In 1865 we could not have guessed that the discovery of oil could concentrate so much wealth in just a few hands. Corporations were never thoughtfully guided by good legislation about how this valuable substance called oil might be used for the good of many people on earth, instead of only a few.

Oregon can be one of those places that takes this historic leadership role. We know by example from Monday's hearing of Glen Murray, former minister of the environment from Ontario, Canada that small places like Oregon can do this, and our economy will grow in beautiful more sustainable ways....

We must legislate about fossil fuels if we want to be a more sustainable thriving state.

"If we help build historic legislation, more will follow us."

Thank you.

Anne Nesse
