

The -12 amendment to HB4001 is the wrong way to approach this issue. We don't know if carbon is doing any harm at all scientifically but the idea is to do something even if it won't clean up the environment, do something to make people think they are doing good. All this legislation does is to make environmentalists feel good but it destroys people and their livelihoods.

It takes energy to produce food and fiber. This legislation puts my family farm at risk of going out of business. We want to keep this land clean and able to produce and we want an environment that our grandchildren can grow up in. When legislation like this is passed it puts family farms out of business and only big corporate farms are able to have the means to operate under such laws. Please vote no on HB 4001 or any other cap and trade bills that come before you.

Sincerely,

Janice Flegel
