I am a small farmer in rural Oregon. I can already clearly see the effects of climate change, as can just about anyone else in Oregon would if they are paying attention at all.

Drier summers are already affecting farmers, timber, recreation, drinking water. Huge fires making the air unhealthy to breath. Everyone is feeling the effects in the past few years, even if they choose to ignore it.

I hear folks saying it costs too much to change and reduce carbon emissions. But the cost of not acting immediately will be much higher. More forest fires, more droughts, more powerful storms, more flooding. Coastal towns are seeing rising seas which will get much worse. Warmer oceans with higher acidity are already crippling fishing. The list just goes on and on. All very costly. All requiring difficult changes to our lives and how we live.

I support LC19, and you should too.

I support strong climate legislation for Oregon's future.

Oregon was a leader when it enacted policies protecting air quality and environmental quality that helped lead the way to national policies in the Environmental Policy Act of 1970 and the Clean Water Act of 1972.

Oregon was a leader in reducing litter with the bottle bill.

It is now time for Oregon to step up and show some leadership in fighting climate change.

I support LC19 as the first step!

If we don't act now, we doom our children and grandchildren to a future we have difficulty imagining.

The costs they will bear adapting to and mitigating the effects of climate change are much higher than the costs to us of acting now. The quality of their lives will be much less. The dangers of drought, forest fires, lack of water, extreme storm events, rising seas, failing crops, are far beyond the little inconvenience we face now in limiting carbon emissions.

I support a strong Oregon Carbon Cap and Trade policy that will rapidly reduce green house emissions, to spare future generations the dire consequences if we fail to act now.
