Please save our forests for the sake of our future. Our coastal range in particular holds carbon to a remarkable extent. It is a resource belonging to the world, not Wall Street firms or timber barons or even state agencies anxious for short term profits. The timber industry has done us a disservice by not acting in a good faith, sustainable way. They have driven a wedge between rural and urban communities; instead, we should be acting as one since as we are all affected by the same climate emergency. Our government should take over from them by creating rural green energy jobs, which will provide a livelihood for the long term. My family supports and works for a strong cap and invest policy. We want our government to protect our future by fighting climate change as the enemy it is. Support LC 19.

Thanks,
Teresa Mueller and family
