Wildfires, record warm temperatures, record rain and snowfall, flooding, and melting ice caps are all the result of human effect on climate through the release of CO2 into our atmosphere. The time for action is way past, but currently I believe, not too late. We must act.

A strong step towards this is the approval of SB1530.

Please. Think about our planet. Think about our children.

Do the right thing!

Sincerely,
Steve Sheldon
