Subject: Reduce Greenhouse gasses
Date: Wednesday, January 22, 2020 8:27:23 PM

I am a resident of Ashland, Oregon who wishes to make a comment to the Oregon Senate. It is vital that Oregon establish a very strong program to reduce greenhouse gas emissions. I totally support legislation to establish a strong program to impose statewide and sector-wide greenhouse gas emissions reduction in Oregon. Things contributing to greenhouse gas creation are fuel emission, pesticides, plastics, the huge numbers of factory farmed animals, primarily cows and hogs and their methane emissions, airplanes, factories, coal, and no many other substances are creating a world which will become uninhabitable for our future youth if we do not take steps immediately to change the way we live, what we consume, what we produce, how we treat our wildlife, our resources, our forests, etc. Mankind is destroying all of nature's balances with mankind's lack of sensitivity, lack of insight into the future. For example, culling some of our wildlife creatures causing serious imbalances. We must all work together to clean up our act as the human species, it is we who are creating climate change, causing fires such as are presently devouring thousands of Australia's wildlife species. The world of humans must awaken, and change all directions if our planet is to survive.
