---

My name is Alyce Moore and I live in a rural county in Oregon and I am very concerned that once again, our state will fail to adopt reasonable caps on carbon and methane emissions. Greenhouse gasses know no boundaries and do not respect county lines nor differentiate between urbane or rural populations. LC 19 provides a good framework for badly needed legislation, however, it needs tweaking and strengthening in order to become a law that is effective and fair. The urgency of this matter is clear to everyone so please move LC 19 to the next step of the legislative process. Thank You.
