

Members:

It was very clear from Dr. Chi's presentation today that if you wish to achieve improvements in the efficiency and good outcomes being enjoyed by the citizens of Taiwan (as typified by a total of 7 deaths from Covid 19 out of a population of 23,822,725) you have simply two tasks:

1. Replace the current multi risk pool, employment-based and insurance industry-driven financing system with a single risk pool, single payer system with universal access to coverage for all ages and residents.

2. Demand and implement a single Electronic Health Record system be implemented throughout the state of Oregon.
