

Task Force on Universal Health Care

Design Framework

December 8, 2020

Task Force on Universal Health Care

To assist the Universal Health Care Task Force in completing the tasks specified in Senate Bill 770 (2019) and the Technical Advisory Groups (TAGs), project staff developed a draft design framework. The framework is intended to; (1) highlight a list of key considerations for each design element of the Health Care for All Oregon Plan (the Plan), (2) identify interdependencies among TAGs by design features, and (3) outline a set of questions related to the each design element.

As reflected in the project charters for the TAGs, there are design choices and policy decisions that need to be carefully defined and assessed to inform the final recommendations put forth by the Task Force in June. The framework seeks to reflect recent conversations among the TAGs by outlining questions and issues that start to bring into better focus the key design features of the Plan. The framework is intended to support the policy development work of the TAGs. For example, as policy proposals are considered by one TAG, the framework can track whether and how that proposal may affect the work of another TAG. In other words, capturing major cross-cutting issues that are likely to be considered by multiple TAGs. This process is fundamental given the multiple goals and outcomes of the TAGs.¹

The framework is a working draft and shared with the expectation the members will refine and add to the set of questions, as needed, based on discussions by the Task Force, TAGs, and Consumer Advisory Committee. As the TAGs work through their project scope charters and develop a set of proposals, members will be able to fill-in the final column ("draft proposals").
