

I am a primary care physician in Oregon. Every day my clinic team works tirelessly to help all of our patients. Those with psychiatric conditions require a lot of attention from staff, careful clinical decision making, and quite family emotional energy. We understand how much need each patient has and the mortal risks associated with their conditions. OPAL services help us provide better care in a way that enhances our experience of primary care practice. Few interventions in medicine these days are able to strike that balance! I urge you to support HB 2691!
