

As an Oregon consumer who wants transparency across ALL products and medications, I fully support SB 649 and believe it is my right as a consumer to all information for ANY medication, including vaccine inserts, that should be made available to me.

SB 649 would help provide better information access and support informed consent by making information accessible and available that frankly, should already be easy for me as a patient or parent of a patient to access from my health care provider. I have a right as an Oregon citizen to know if any of the priority chemicals of concern by OHA would be contained in any of the medications recommended to me and to my family.

Thank you for your consideration in voting in favor of SB 649! This is a positive step toward greater transparency and ease of access to information that should be made available in today's digital information age!

Kind Regards,
Amber
