

It is time for strong action on climate change (in keeping with the IPCC report and the US agencies' report). My family wants our future protected from climate chaos and I believe the public expects you to do the right and wise thing in cleaning up our state's contribution to climate change.

I support broad application of the cap and trade provisions to the CO2 sources relevant to Oregon.

I support science-based standards that get us on the necessary 12-year time line that could keep CO2 increases to 1.5 C.

I support a funds distribution panel which is recognized as fair and legitimate by both parties.
