

Members Joint Committee on Carbon Reduction

Co Chair Senator Michael Demborw

Co Chair Representative Karin Power

Below are two visual resources that may help the jccr make best decisions on HB2020:

From The New York Times:

How to Cut U.S. Emissions Faster? Do What These Countries Are Doing.

How the United States could cut emissions in half, using policies that other countries already have in place.

<https://www.nytimes.com/interactive/2019/02/13/climate/cut-us-emissions-with-policies-from-other-countries.html>

This is a simple graphic from the NYTimes February 13, 2019 of how much 7 of the best international solutions work to lower carbon emissions in the world.

HB2020 is a great start copy and create what solutions work best for the State of Oregon.

Another visual resource for those who learn better by seeing what this would look like:

I spent 6 years in 9 countries including a year in China with a crew of 300 finding and recording and presenting the best solutions worldwide in a documentary.

Please visit the website at [DeepGreenMovie.com](http://DeepGreenMovie.com). for movie links and lots of resources for information from some of the best people and organizations in the world for this most important issue.

My Representative Andrea Salinas has several hard copies of the Chapter Version of the documentary "Deep Green" for Teachers. Watch in small bites when you have time. Glad to send copies to the committee.

Please do us proud with a strong bill to help stabilize The Life Support System.

best
