

Hello, I would like to say that being a small business owner and hearing how gas prices would go up even further is very detrimental to small business owners and the lower income people who need to commute to their jobs. I think we need to take care of the environment but we need to be wise about doing so. Human beings should be our most important consideration in all of these matters. In the rural communities especially, mass transit is not available and so individual automobiles are necessary for travel to important destinations, such as work, medical appointments, grocery stores and much more.

Please consider the impact of this legislation on everyone who will be effected by it.

Thank you.

Cathy Stewart, Owner of a small business, voter
