

Dear Lawmakers,

Please consider the ramifications of this matter. Many people already struggle to afford heat and fuel to get to work. If this passes, it would not only make it unaffordable for many of us to heat our homes and businesses, it would significantly lower our property values since buyers would be looking for homes with a different source of heat!

Many low income families would be even more dependant on government programs and are already having to bite into their food and housing budgets just to be able to afford gas to get to work and their childrens school. Please consider the hardships this would create and vote No on doubling our cost for Natural gas and raising the price of gas!

Thank you for listening.
