

Hello:

I am a loyal advocate for 350PDX, and would like to submit my comments in support of this extremely important bill.

First off, please consider capping ghg emissions at 55% reduction from 1990 levels by 2035 and 100% reduction from 1990 by 2050.

Think "Intel Corporation" for this one: no exemption for fluorinated gases from the semiconductor industry, particularly in Washington County.

Next, allow no offsets; agriculture and forestry emission reductions should be the focus of *separate legislation*.

Lastly, and most importantly, please maintain the provision that revenues from sale of free allowance can only be used to strengthen existing utility-based EE & RE and *low-income* rebate programs.

Thank you very much for the opportunity to express my support for passage of this bill.

Don't back down and give in to the fear mongering!

Best Regards,
