

We are headed for the cliff of climate disaster and must strengthen and pass the strongest, most just and most transparent bill possible. Do not let big money over run and dominate this process.

Limit free allowances, cap emissions even sooner than outlined. We are in danger of reaching a place we cannot recover from. Do not allow exemptions for semiconductor industry, NO new fossil fuel infrastructure. There should be a separate fund for transportation that is not fossil fuel based. The highway department may be too set in the fossil fuel era.

Thank you for your important work. Dell Goldsmith
