

To the Committee:

I am writing in support of HB 2883 prohibiting use of polystyrene take out containers. This bill would go a long way to help rid our environment of toxic plastic waste. There are many convenient alternatives to use of these containers so I don't believe there would be any negative impact on restaurants or consumers. I just really strongly believe that we should not be destroying our environment for future generations just for the simple convenience of using a container once that will take hundreds or thousands of years to disappear, and even then will leave a toxic residue.

Pleas support this legislation!

Thank you!
