

Please Pass HB 2020:

Please don't gut and stuff this bill with lobbying propaganda from timber industry and LNG spokespersons. Further construction of LNG export infrastructure will decimate our already polluted water and ocean seafood industries. The LNG will be shipped to China where its will be made into plastics that are chocking our oceans. We need local infrastructure green energy projects to give Oregon workers jobs in an economy they can be proud of. Forest harvesting must comply with Forest Stewardship Council standards and agricultural production must be organic. Clearcutting has been followed by massive toxic arial spraying of deadly, cancer causing chemicals. Doug Fir trees grow vigorously without having herbicides sprayed into our water shed. I know, I live in the coast range where the Dough Fir trees crowd out every other species including my organic orchard if I don't remove them by hand.
