

This is bad for Oregon and gives other states, regions and countries a competitive advantage over materials made and sold from Oregon. It is unfair to the working families of Oregon. It actually increases the carbon emissions globally. This is simply another way a liberal state government is trying to increase taxes -fill their coffers with even more money off the backs of Oregon workers - with no accountability on spending or resource distribution. It is all about the Liberal agenda of big government, loss of individual liberty and power by the few over the many. It is a continued effort towards socialism by the liberal establishment - if they want socialism - they should move to Russia or Venezuela - it does not work. Please preserve our freedoms, our income, our liberties and our independence. Ready to leave Oregon at the 1st chance.....this is becoming another California - bankrupt morally, economically and socially.
