

I oppose HB 3063 for multiple reasons: human rights, first amendment rights, the numerous studies done by the National Institute of Health, Universities, the BMJ showing bodily damage done from vaccines. The conflict of interest of the CDC Foundation and WHO and their contributions from vaccine manufacturers makes me ill. The ethics of vaccines being forced on people for greed is morally wrong and unhealthy. I don't know how much research you have personally done on this subject in the medical journals

so I have included some links you should investigate to have knowledge of what you are deciding. These documents are just a small sampling of research that shows vaccines are unsafe and experimental and not 100% effective.

I hope you take this very seriously and listen to your conscience.
The vaccines also are affecting viable plasma.

I also believe manufacturer vaccine inserts should be presented to parents prior to vaccination and read over between the doctor and the parent and all risk of vaccine danger discussed. Doctors should be held liable if a vaccine injury occurs since manufacturers cannot. The doctor should check all patients for what the manufacturer warnings, contraindications, etc. including allergy testing.

check the selected safety information section:n
