

I have a family concern to the vaccine mandated bill. I have history of vaccine reaction in the 90s for which I was hospitalized with as a baby and biological parents told to not further vax with mmr as I was severely allergic. My baby cousin died of SIDS days after a ped vaccine. I have no proof of this as I was never given documentation and am now an adult with reactions to many vaccines I remember getting, including HPV series which caused temporary swelling- bruising- fever- depression, chronic severe cycle change PCOS, hormonal changes, All over body pain like MS I was told this is all normal and ok. I now am disabled due to vaccine injury. No one protected me I have no document of past reaction. I had requested Drs to not vaccinate me, I have not been given the choice I was a child with a voice and Drs wouldnt listen due to lack of Dr documentation and forceful vax already. Why keep pushing to take medical freedoms away, Drs are already using duress to push vaccines. Both My biological parents have immune dysfunction, I was not allowed medical exemptions. I struggle to write this to protect others freedom of choice, there is harm with vax and harm without it should be a educated choice of adults and teens what we have done to our body medicaly or other.. please let me say now that im adult no more vax for me, iv been harmed and no access to records of it. No records being kept, no Drs taking note of reactions. We should all have choices.

Thank you for your time, in conclusion Please protect the future and allow them free will to chose who touches there bodys, and what goes in there bodys. No mandatory vaccines
