

Unvaccinated children do not cause a threat to society. They do not carry those diseases.

If a child is fully vaccinated, being scared of an unvaccinated kid is nonsense. And fully vaccinated people get and spread diseases as well. Why then force others?

Vaccines are not 100% effective – however having measles guarantees such immunity for life.

None of the vaccines could be labeled as “safe”. Every single one of them lists potential side effects.

Wouldn't that call for a freedom of choice to determine who decides to be vaccinated?

Stop the bill HB 3063 ; prevent it from public hearing. ALLOW EXCEPTIONS

Sincerely

M. Buczak
