

Dear Representatives,

Would you consider introducing a bill that forces all adults to repeatedly inject :

“chick embryo cell culture, WI-38 human diploid lung fibroblasts, vitamins, amino acids, fetal bovine serum, sucrose, glutamate, recombinant human albumin, neomycin, sorbitol, hydrolyzed gelatin, sodium phosphate, sodium chloride” (as quoted by CDC on <https://www.cdc.gov/vaccines/pubs/pinkbook/downloads/appendices/B/excipient-table-2.pdf>) while promising them plethora of potential side effects but not promising them that this would prevent any disease?

(Where WI-38 is a diploid human cell strain composed of fibroblasts derived from lung tissue of a 3-months gestation aborted female fetus. Fetal bovine serum comes from the blood drawn from a bovine fetus via a closed system of collection at the slaughterhouse – but this is only a list of ingredients for a single vaccine ...)

Would you be able to convince grownups to repeat it again at least 58 times for other shots?
Would you consider coercing them into compliance by threatening “if they don’t do it they would be banned from their workplaces”?

And all of this would be done with no exception. With no possibility to opt-out: no matter what the person’s ethical, religious beliefs are; disregarding weight, family history, ethnic background, sensitivities or allergies .

No voice, no opinions – just inject them all.....

What would be the output of such proposition?

How would your constituents react to such a vote?

Most likely they would disagree.

Why are you then considering such an option for vaccination of children???

Isn’t it adults who experience more complications if they get indeed sick? .

Is it because children are less vocal? Because they easier disappear from the system if they get vaccine injured?

Is it because it is easier to place a pressure on and coerce their parents? Is it because there are smaller and you won’t need to face them? Is it because they are still developing and any potential side effects could be blamed on “previously undiagnosed”?

What gives you the right to determine what goes inside anybody – whether it is a grownup or SOMEBODY’S child???

By all means provide education, encourage parents who want to vaccinate to follow up on suggested schedules.

But allow for EXCEPTIONS. Let parents choose what is best for their children.

Stop the public hearing for HB 3063 – democracy involves protecting not coercing.

Sincerely

Monika Brink
