

I have grave concerns with the vaccination mandate present in House Bill 3063. This bill is based on false assumptions and creates unnecessary hysteria. Vaccine exemptions must be maintained and Informed Consent must be honored, as it is a basic policy in both ethics and law.

Here are some key concerns:

- Vaccine makers are indemnified from lawsuits related to the safety of their products. A citizen injured by a vaccine must sue our federal government.
- Over \$4 billion has been paid out by the US Government for vaccine injuries and deaths and the Department of Health & Human Services estimates less than 1% of adverse events are even reported. Mandating any procedure involving such risks is unethical.
- The Department of Health & Human Services has failed in its Congressional directive to study vaccine safety for 30 years.
- Mandating liability-free vaccines that have not been properly safety tested is in direct opposition to the first tenet of the Nuremberg Code: The voluntary consent of the human subject is absolutely essential.

Please stand up and hold vaccine manufacturers to a higher standard, for our children's sake. Cleaner vaccines are possible. Until then, please consider differing viewpoints. There are many highly qualified and educated individuals speaking out, along with many families who have experienced the realities of vaccine injury. Please be willing to listen.

Thank you for your consideration.
