

My name is Alyssa Wakefield and I oppose HB 3063. Children do not automatically carry and spread disease just because they are unvaccinated, just like vaccinated children don't carry and spread any of the diseases there are no vaccines. It's appalling that a child can actually be infected with hepatitis B or be HIV positive and can attend school with no extra precautions taken yet healthy unvaccinated children must jump through hoops to enjoy the same right. Vaccines are recognized by the Supreme Court as being "unavoidably unsafe" so parents MUST retain the right to choose whether to expose their children to that risk or not — without retaliation. There are zero checks and balances in place to protect children from the barrage of vaccines coming through the pipeline, vaccines that the CDC (who holds many vaccine patents) and pharmaceutical companies (who promise their safety yet refuse to provide true inert placebos in safety trials) profit from.

Our legislators are supposed to be public servants - working for the people, not for the same pharmaceutical companies that line many pockets and try to sway voting. Please vote NO on HB 3063.
