

My name is Trent Hetterley of zip code 97862 and most important father of three healthy children.

It is imperative that we preserve our right of medical freedom. We live in the land of the free, which means we shall have the freedom of choosing our medical care and procedures, vaccines included.

Recently the HHS lost a legal case regarding their ability to do and uphold what they legally were to do regarding vaccines, vaccine studies, and vaccine safety.

"This will come as big and important news for anyone concerned with the safety of vaccines: as it turns out the federal government has been neglecting safety obligation for decades, which has been proven in a court of law bringing RFK Jr and ICAN to victory over DHHS." please take the time to read this article explaining the case and the ruling.

Today anyone age 50 and above are considered immunized by nature. Why? Because they've been exposed. they've most likely have gotten measles at some point in their childhood. Measles is not Ebola. Measles is not a brain eating amoeba. In new science Measles is shown to help reduce the chances of some cancers, and even better yet, destroy others when injected into tumors. Science is just now barley getting into the surface of our immune system and its abilities and how common none life threatening childhood illnesses effect it. 60 cases is hardly an "outbreak" or "state of emergency" this is fear mongering.

There must be a separation of myself and my families medical choices and the government. This is my body. these are my children's bodies. I as an American, and human on this [plant.it](http://plant.it) is my human right. We must retain these rights, even more so against a product and procedure that may cause serious injury and/or death. Vaccines have been ruled "Unavoidably unsafe". I have the human right to make an informed decision for myself and for my children as I see fit as their parent.

Mandated vaccines, and removal of my rights to choose against such procedures is against the Nuremberg code. Have you read it? ( I will post below)

<https://history.nih.gov/research/downloads/nuremberg.pdf>

Lastly. Medical exemptions can be very costly and hard to find a board certified physician who is willing to risk their career for my child's safety. We have significant family history of autoimmune disorders, mental health illness and immediate family vaccine injuries (documented by a board certified physician). and yet, these things do not qualify my children for a medical exemption for vaccinations. we rely on philosophical and religious exemptions for our children to live the American dream and receive a public education and child care. Also those in minority communities and in poverty do not have the luxury of extra doctor visits and expensive testing which put that population at extreme risks of adverse reactions due to the lack of ability and access. If this bill is to go forward and pass, we will not comply. we will not be vaccinating, we will be opting for a home schooling education. This law will not result in more vaccinations, it will result in lower public school attendees. We will not bow to the government over stepping our human right to choose our medical decisions for us and our family.

Thank you for your time, please on behalf of myself and my family, vote against HB 3036

Best Regards. Trent Hetterley of 97862.
