

To whom it may concern-

I am pleading with all parties involved, to please consider the impact on babies and children, and the details of the supposedly "unvaccinated" that have been purposely neglected by those who stand to financially benefit from these- the pharmaceutical companies.

Some things to consider:

Mandating Vaccination for ALL students in Oregon for school attendance [will impact 31,521 students](#) that have filed a non-medical exemption

Exempt in Oregon means the student didn't receive [ALL 31 of 31 required](#) vaccines for school attendance.

Oregon has [extremely high MMR rates](#) across all counties.

[OHA data on high vaccination rates](#) across Oregon.

7.5% of kindergarteners file an exemption form, meaning they could simply be exempt from ONE vaccine and not ALL vaccines.

[Only 2.6% of students](#) in K-12 are 100% UNVACCINATED so that means of the people who filed an exemption, [66% of them partially vaccinated](#) their kids! (Because only 2.6% of the 7.5% of exemptions did no vaccines, that means 4.9% did vaccinate, $4.9/7.5=65\%$)

[Exemption rates go up naturally](#) over time as a new vaccine is added to the schedule, parents are opting out until they are ready.

Until this past summer we lived in Oregon, where I was raising my child. As this crazy overreach is taking place, I am so relieved we have left, but I still care about this cause and am one of the many who are desperately trying to educate others on the basics they will never share with you.

If "herd immunity" (a term hijacked and literally turned around) actually worked, even with Oregon's supposedly "high" number of "unvaccinated" kids, based on the numbers above, this measles outbreak couldn't be attributed to them.

Please reconsider a mandate, and at the very least allow for a delayed schedule to give our babies and children a chance to recuperate from these very toxic drugs.

Thanks for listening,

Lily B Zagha
