

To Whom it may concern,

I am very opposed to mandatory vaccines due to the fact most people are not informed as to the ingredients. They are unaware they contain mercury, aluminum and cells harvested from aborted fetuses. Autoimmune disease is skyrocketing. Our body is attacking something foreign within our cells. Who knows if these materials are the culprit.

Where is the informed consent here? Also the use of mandatory prescriptive medicine that can have moral objections and side effects and heavy metal toxicity is reprehensible. This is a free country. Let those who fear certain disease freely go and received these vaccines if they wish. If the vaccines were made in a homeopathic form, we would have wonderful immunity after about 30 days and no side effects. This should have been the way we should have gone, but I am sure the money would not be the same to the drug companies which is always the bottom line.
