

I am writing to you from Bend OR my opposition to 3063. Vaccines have been proven to have adverse side effects. Therefore there is a true risk involved. It is the parents decision and not the states to decide what happens in regards to their children. Until vaccines are safe, effective, and individual genetic testing pre vaccination is available absolutely no way should a parent be forced to vaccinate their child. It is opening a dangerous door taking the right to choose away. Thanks for your time

Sue Rogers
