Aldous Huxley
(1894-1963)

"There will be in the next generation or so a pharmacological method of making people love their servitude and producing dictatorship without tears so to speak. Producing a kind of painless concentration camp for entire societies so that people will in fact have their liberties taken away from them, but will rather enjoy it, because they will be distracted from any desire to rebel by propaganda, or brainwashing, or brainwashing enhanced by pharmacological methods. And this seems to be the final revolution."

VACCINE FACT:

As of 1900, the number of people who died from Measles was 13.3 in 100,000.

In 1940 it had declined to 0.5 in 100,000, and by 1960 the mortality rate declined to as low as 0.2 in 100,000.

In what year was the Measles vaccine introduced in the U.S.?

THE VACCINE WAS INTRODUCED IN 1963

dextrose
chloride
gelatin
casein
glucose
fructose
detergent
yeast protein
sucrose (sugar)
salts and sugars
sodium phosphate
chicken protein
human albumin
fetal cow serum
cow muscle tissue
cow serum albumin
chicken egg protein
monkey kidney cells
porcine (pig) gelatin
porcine (pig) arginine
calf serum and protein
embryonic guinea pig cells
DNA from pig circoviruses (PCV)
insect cell bacterial, and viral protein
Canine (dog) Kidney cell protein and DNA
Mueller's media (containing cow extracts)

thimerosal (Mercury)
ethanol - anti-freeze
polysorbate 20 & 80
aluminum dye
formaldehyde
aluminum
acetone
alcohol
barium
E. coli

human embryonic (aborted baby)
lung cultures
aborted human diploid cell cultures
(WI-38 & MRC-5)

**“Our lives begin to end
the day we become silent
about things that matter.”
— Martin Luther King, Jr.**

Background

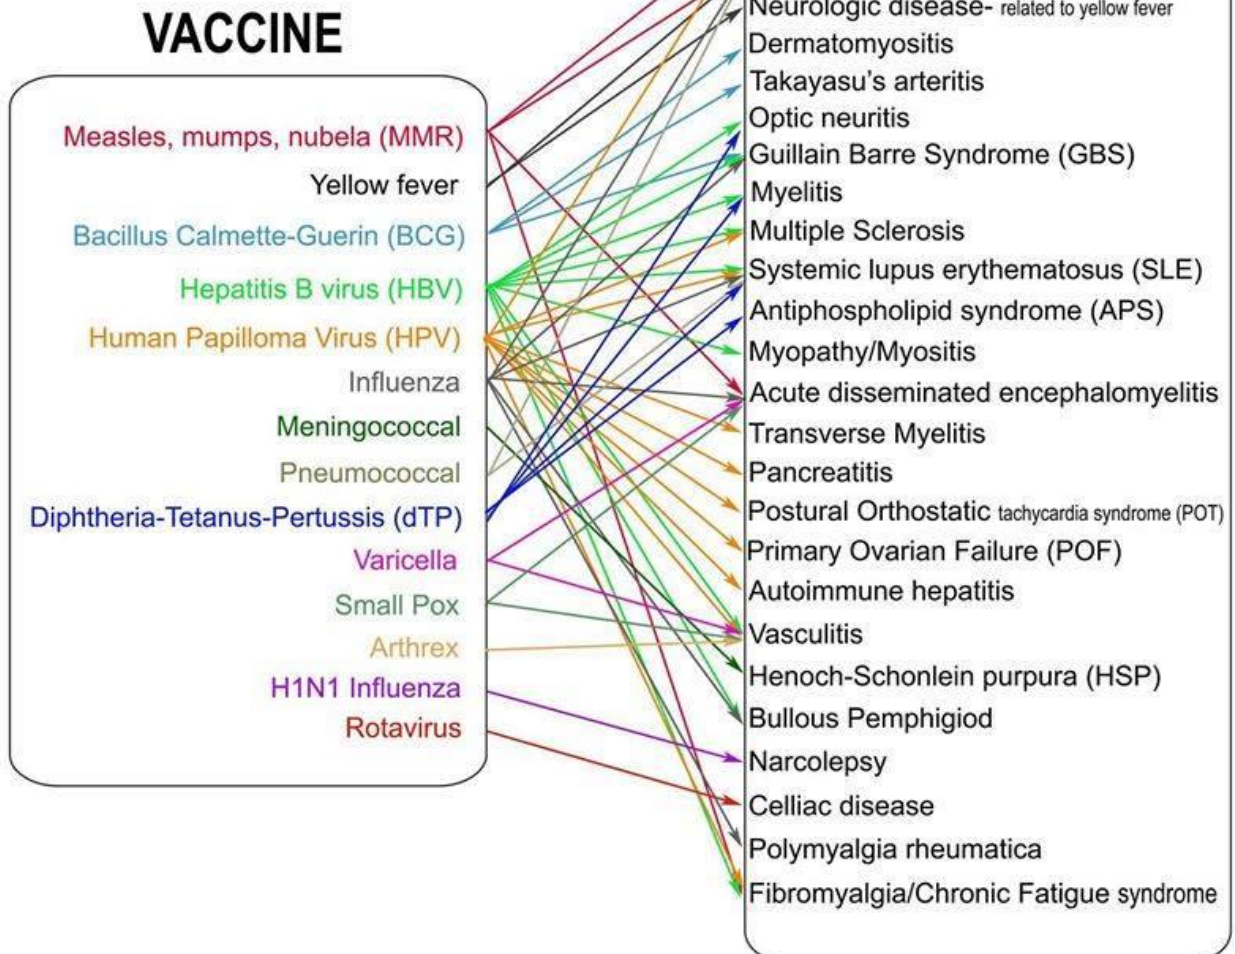

In the 1980s vaccine manufacturers were frequently sued by the parents of children who were permanently disabled or died following vaccination. After paying out millions of dollars in these lawsuits, vaccine manufacturers were prepared to stop producing vaccines unless the federal government provided them with immunity from jury verdicts.

In response to pharmaceutical manufacturers' threat to close their own vaccine factories, in 1986 Congress passed the National Childhood Vaccine Injury Act (NCVIA), protecting vaccine manufacturers from most financial liability associated with their products. Under NCVIA, the National Vaccine Injury Compensation Program (VICP) was created to provide cost-effective arbitration for vaccine injury claims. Vaccine manufacturers can no longer be sued in a state or federal court for damages arising from a vaccine-related injury or death unless a petition for compensation under the new program is filed and denied.

Compensation under the program is paid for by a 75-cent excise tax on every vaccine purchased. (MMR contains three vaccines, so the tax is \$2.25.) The money goes into a Trust Fund managed by the U.S. Department of the Treasury. As of Mar 1, 2016, more than \$3.2 billion had already been paid out, most of it to compensate parents whose children were severely disabled or died after receiving vaccines.¹ Today, vaccine manufacturers not only make millions of dollars annually from their lucrative business, but they have been disincentivized from producing safer vaccines, since they are shielded from liability when their mandatory products harm consumers.

Vaccine Adverse Event Reporting System (VAERS)

AUTOIMMUNE DISEASE

6.2 Postmarketing Experience

The safety experience with FLUCELVAX (trivalent influenza vaccine) is relevant to FLUCELVAX QUADRIVALENT, because both vaccines are manufactured using the same process and have overlapping compositions.

The following additional adverse events have been identified during post-approval use of FLUCELVAX. Because these events are reported voluntarily from a population of uncertain size, it is not always possible to reliably estimate their frequency or establish a causal relationship to the vaccine.

Immune system disorders: Anaphylactic reaction, angioedema.

Skin and subcutaneous tissue disorders: Generalized skin reactions including pruritus, urticaria or non-specific rash.

Nervous systems disorders: Syncope, Presyncope

General disorders and administration site conditions: Extensive swelling of injected limb.

7 DRUG INTERACTIONS

7.1 Concomitant use with Other Vaccines

No data are available to assess the concomitant administration of FLUCELVAX QUADRIVALENT with other vaccines.

It appears that women who are vaccinated during pregnancy will be part of a study to determine whether the vaccine is safe for pregnant women. Anyone who's pregnant should be informed of this. Also,...

8 USE IN SPECIFIC POPULATIONS

8.1 Pregnancy

Pregnancy Exposure Registry

There is a pregnancy exposure registry that monitors pregnancy outcomes in women exposed to FLUCELVAX QUADRIVALENT during pregnancy. Women who are vaccinated with FLUCELVAX QUADRIVALENT during pregnancy are encouraged to enroll in the registry by calling 1-855-358-8966 or sending an email to Seqirus at us.medicalinformation@seqirus.com.

Pregnancy Category B: The developmental and reproductive toxicity study performed with the trivalent formulation of FLUCELVAX is relevant to FLUCELVAX QUADRIVALENT because both vaccines share the same manufacturing process and route of administration. A reproductive and developmental toxicity study has been performed in rabbits with FLUCELVAX, with a dose level that was approximately 11 times the human dose based on body weight. The study revealed no evidence of impaired female fertility or harm to the fetus. There are, however, no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this vaccine should be used during pregnancy only if clearly needed.

In a reproductive and developmental toxicity study, the effect of FLUCELVAX containing 45 mcg HA/dose on embryo-fetal and post-natal development was evaluated in pregnant rabbits. Animals were administered vaccine by intramuscular injection 3 times prior to gestation, during the period of organogenesis (gestation day 7) and later in pregnancy (gestation day 20), 0.5 mL/rabbit/occasion (approximately 11-fold excess relative to the projected human dose on

WHAT HAPPENED IN 1986?

- In 1986, Reagan passed a law that gave legal immunity to vaccine manufacturers.
- They could no longer be sued for injuries or death caused by their products. Safe vaccines wouldn't need such protection.
- Once that law passed, we suddenly 'needed' 48 additional doses of vaccines. (Do you remember any outbreaks in 1989?)
- Also, since that law was passed, U.S. Federal Government has paid out more than \$4 Billion in vaccine injury compensation, and that's only a fraction of actual injuries.
- The U.S. gives more vaccines than most developed countries, yet we have the sickest kids

GUESS WHAT?

The CDC has only ever tested MMR and Thimerosal for a link to autism. The remaining 15 vaccines and 37 common ingredients remain untested for links to autism.

THERE ARE RISKS | YOU HAVE CHOICES

If "science were settled..."

...we'd still be giving kids safe, side-effect-free heroin for their coughs

...we'd still think hand washing and disease spread weren't related

...we'd still think radiation had "health benefits"

...we'd still be smoking doctor-recommended cigarettes

...we'd still be lobotomizing mental health patients

**Science is constantly changing.

Once a government is committed to the principle of silencing the voice of opposition, it has only one way to go, and that is down the path of increasingly repressive measures, until it becomes a source of terror to all its citizens and creates a country where everyone lives in fear.

— *Harry S. Truman* —

AZ QUOTES

"A critical point which is never mentioned by those advocating mass vaccination, is that children's health has declined significantly since 1960 when vaccines began to be widely used. According to the National Health Interview Survey conducted annually...a shocking 31% of US children today have chronic health problems... In my medical career, I've treated vaccinated and unvaccinated children, and the unvaccinated were far healthier and more robust. Allergies, asthma, and behavioral and attention disturbances were clearly more common in my young patients who were vaccinated."

Philip Incao MD, Testimony on the Hepatitis Vaccine, Ohio 3/1/99
