

Dear Oregonian Legislators,

As a board-certified family physician and public health educator, I very strongly oppose HB 3063, which would violate the health care freedom rights of all Oregonians.

Contrary to all the deceit, hyperbole, outright lies, and nonsense that you have heard from vaccine industry proponents, vaccines are absolutely NOT safe and are most definitely NOT free of adverse reactions in children and adults. I have observed many, severe reactions to vaccinations in my large patient population over the past thirty years, including permanent, neurological damage, and chronic immune system dysfunction.

All U.S. citizens, in Oregon and every other state, should have the right to choose the health care that they wish to use for themselves and their families. Forced vaccinations are an anathema to the public health and welfare, and an affront to constitutional democracy.

The truth about the public health dangers of vaccinations is gradually being revealed against the background of vaccine pharmaceutical industry propaganda. You will want to be on the right side of history when the truth is fully known.

For the sake of the public welfare, you must support nonmedical vaccine exemptions in Oregon!

Respectfully yours,  
Mitchell A. Fleisher, M.D., D.Ht., D.A.B.F.M.
