

Climate change is a threat to the future of our state. Science tells us that the earth is warming faster than was expected, yet our state and federal governments seem powerless to make the changes needed to change the course of this catastrophic event. HB2020 is a beginning that should be enacted without controversy. Fossil fuel companies will lobby hard against it, but it is time to resist their calls for more of the same. They have known for many years that fossil fuels are heating up our environment, but the lure of profits have twisted their message and caused them to focus on short term gains rather than long term survival. I support HB2020 and urge our legislatures to vote to approve the Clean Energy and Jobs bill.
