RE: HB 3063

Oppose House Bill 3063

Vaccines have never been proven safe or effective in any **LONG-TERM AND double-blind study against an inert placebo.**

Vaccines have side-effects and thus informed choice must be maintained.

One size does not fit all. Vaccines are NOT customized to individual biological needs or individual chemistry.

Many childhood illnesses are natural, not life threatening, and can be treated at home. Those who wish to build natural immunity must be allowed their natural right to make this decision.

Imposing vaccines is a **violation of a natural human right.** Freedom of choice must include the option to NOT have chemicals injected.

The **manufacturers of vaccines are not being held responsible or liable for the content and effects of their vaccines.** Because of this there is no duty of care, no product liability, and no incentive to offer safe vaccines. **Unless and until safe vaccines are available choice must be maintained.**

Vaccine injuries are real and thus vaccine choice must continue!
