

I am a resident of Jackson County, Oregon. Being a California transplant I am proud of the record of the people of Oregon to stand up for their rights.

The mandatory vaccination of all children in order that they be allowed to attend school is the opposite of personal freedom. When a person takes on the challenge of being a parent they become even more aware of the possible ways their child could be injured. In this case there are numerous studies now about vaccine injured children. I bring your attention to 2 recent free Docu-series educating the public about the pros and cons of vaccinations. One is called Vaccines Revealed, the other is called the Truth About Vaccines. Each thoroughly observes the science of vaccines (what vaccines contain or are made of etc), and the personal stories of families that have had catastrophic health issues as a result of certain vaccines, and/or too many vaccines. Everyone should see these series before making the decision to vaccinate...or pass any laws for mandatory vaccination!

I urge you to stop this legislation from moving forward. Measles has been in our midst for many years! My generation all built up natural immunities from these now demonized diseases! All of my school mates had the measles and none of them died! It is

only through ignorance that kids would die from the measles. Especially in this day and age. And, if you could see how the whole family suffers when their child is even mildly affected by a vaccination...much less becomes autistic! OMGoodness. Please take precautions here, ban this bill!

Sincerely, your constituent,
Karen Potts
