**Subject:** HB 3063

It has come to my attention that the legislature is about to vote on a bill that would require mandatory vaccinations of a plethora of “disease preventative” injections.

I am a teacher with 39 years of professional experience. I have seen many changes in our approaches to educating children. We have attempted to open our doors wider to families of color, broad religious, and socio economic backgrounds.

Since I was a child, there have always been vaccines, however the increase in the range and number of required vaccines is alarming. The decision to make any vaccine mandatory should be a personal family right. It should not be influenced by big pharma or a rushed legislative session. Our access to health care is severely limited, sometimes with long waits or predetermined protocols for treatment and access.

AS AN EDUCATOR , I believe all students have a right to a free, quality education and should NOT be singled out and refused this right due to a current vaccine list. It is our responsibility to provide a continuous same quality education for every child regardless of their vaccine choice. Personally, I have refused updates or new vaccines until I have a chance to research the health benefit.

My grandchild is 2 . I am anxious about the long lasting health deficits of some vaccines. The requirement seems like a Pandora’s Box, opening to another potentially life damaging reaction. Gardasil is one such vaccine.

I encourage prudence and caution in this decision that will affect many life’s. The belief that education and not panic should guide our decision making is paramount to preserving health and freedom.
