Hello,

Because of who's fear is this moving forward so fast?

I want to give my testimony on vaccinations being mandatory in order to attend school, etc.

Do you know how many more kids it will HURT to move this way? How many parents may withhold their children from school because they refuse to put that substance into their children's bodies?

Why aren't the testimonies of those hurt by vaccines taken seriously and talked about publicly? And why is fear being used as a motivating tool to move the masses to push for this in the first place?

My son has received the flu shot and the HPV vaccine. Both times, he immediately came down with severe low platelets and had to remain hospitalized. The doctors were unable to diagnose why his body was responding this way to foreign substances being put into his body.

My sister has a 4 year old. Both she and I did some research on WHAT they put into the vaccines and neither of us want that in our children. These are *ethically questionable ingredients and it deserves our choice to put this in our children's bodies or not. The ingredients have never been highlighted in the media- why not?*

You see, I believe this is about money. Please make the right decision; this is too important because it deals with our children.

-

Sincerely,

Kirsten Groener
