NO TO HB 3063: WHY??? If my child is severely allergic to the ingredients in a vaccine (which I have no idea or knowing if they do or not) I need to risk sacrificing them to protect the immunocompromised? Because essentially that's what you are saying. They do no form of testing to make sure ALL children do not have some underlying issue that can be triggered by a vaccine. It's not a one size fits all schedule. Just like how not everyone can eat peanuts or shellfish or have penicillin. Is it fair to sacrifice those children for the greater good? What if that was your child?

Have you ever looked up the vaccine injury and death stats on VAERS? How about the billions of dollars that have been paid out to the vaccine injured because the court system realizes that vaccines CAN harm. Or what about all the credible doctors, scientists, immunologists, toxicologists that agree with the Supreme Courts deeming vaccines are "unavoidably unsafe." Are you aware that the FDA just got sued for not being able to provide proof that they have done a safety study in the last 30 years? Do you truly believe that the body can handle injecting toxins the same way it does ingesting them? Have you ever looked at the ingredients that are known carcinogens that are in vaccines that they do not test for ? What about the aborted fetal cells used from healthy 12 week fetus' in vaccines that can alter and mutate your DNA? How about the how aluminum (one of MANY known synthetic toxins used in vaccines) nanoparticles that are not dissolved that pass through your blood brain barrier in white blood cells that act as a Trojan horse into your brain and major organs ...

There are risks on both ends. Doctors are humans. Many of them follow what the CDC recommends because they don't have the time to be doing their own vaccine safety studies. Look up the third leading cause of death...it's medical error. Once upon a time cigarettes were recommended by doctors and guaranteed they did not have carcinogenic properties - let's not forget.

I truly feel bad for any family that has had to endure a vaccine induced injury or death then has to see all this anti vaccination bullying.

There are so many people that are not "anti vaxxers" .. they just want informed consent, as well as safer vaccines that are properly studied and administered to diminish the risk of injury. Many of the "whistleblowers" did not say stop vaccinating all together , they only raised question as to why there are so many chronically ill children that all have the same story of regression, death and onset of chronic illness.

NO TO HB 3063
