

To the representatives of the house,

My name is Sarah Heppner and I am opposed to Hb 3063. I have spent countless hours worrying about what to say to you, what references to make from the CDC website and what scientific studies needed to be brought forth to convince you of the proven dangers of forced vaccination over a genetically varied populace. What could I say to convince you that this is also a gross abuse of power and disregard of Religious reasoning and of personal ethics. But I have realized that the powers behind this don't care. Medical proof has been disregarded and shut down time and time again. They do not seem to care about scientific research or the people, they care about money. I realize after attending the hearing in Washington that no matter how valid our testimonies or how thorough our research, that a few of you, seem to have every intention of pushing this bill through. This has opened my eyes to the dissolution of this so called Democracy. It has opened my eyes to the dirty politics that are allowed to happen. No Senator funded or supported by a biotech company or pharmaceutical company should be seated on this panel or be allowed to vote on this issue. But I highly doubt that will be the case. It seems to me that our government and our health has been bought. This is causing me to lose my faith irrevocably in the government. To pass this bill you will be directly treading on the freedom of the American people. My Children and My body, belong to me, not the state, and NOT to the pharmaceutical industry. By backing this bill you are taking a hand in making the first OPEN steps towards tyranny, toward blatantly stepping on and controlling the parental rights and decisions of the people. I have never been outwardly patriotic but now that I see my rights towards my children taken away that I feel it. I feel like fighting and like rising up with my fellow Americans and proving just how seriously we take our freedom. I will NEVER allow another vaccine to enter my children's bodies. I have witnessed and felt what mayhem they can cause to a person's body. I am personally opposed to HB 3063.
