

As a medical student, I am appalled by the notion of state law forcing parents to potentially endanger their young child with too many vaccines too early. It is known that the CDC suppressed scientific results linking vaccines to autism, it is known that adjuvants in vaccines can cause multiple forms of neurological damage, and most importantly, we do not live in a police state. Since the 1970's, the number of CDC-mandated vaccines has multiplied manifold, and no one has yet disproven the connection between vaccination and autism -- which is quickly reaching epidemic proportions and will impact our society in far more detrimental ways for many more generations than will Chicken pox, influenza, and many other diseases for which parents are being scared into vaccinating their children -- many before the child's immune system can even make use of the inoculation and build immunity. Please place your votes from a wholly objective, broad, unemotional point of view: do not set a precedent for the State invading homes and controlling parenting decisions, and do not endanger our young people's psychoemotional health -- we need them to have the emotional intelligence that will determine how they run our society when we are elderly!

"What lies behind us and what lies before us are small matters compared to what lies within us"

-- Ralph Waldo Emerson

"I myself have never been able to find out precisely what feminism is. I only know that people call me a feminist whenever I express sentiments that differentiate me from a doormat or a prostitute."

-- Rebecca West

**"What a child doesn't receive he can seldom later give."**

P.D. James, *Time to Be in Earnest*

"But no matter how many little discomforts there may be at sea, one's real cares and worries seem to drop out of sight as the land slips behind the horizon. Once we were at sea there was no point in worrying, there was nothing we could do about our problems till we reached the next port... Life was, for a while, stripped of its artificialities; [other problems] seemed quite unimportant compared with the state of the wind and the sea and the length of the day's run."
